Sub Soiler

Model SCP-33 Shown with Standard Equipment

Even though Brillion Sub Soilers are small in size, these units have the capacity to handle compaction issues just like other sophisticated units on the market, but are designed for users with minimal horsepower. Many specialty producers rely on Brillion Sub Soilers for vineyard and orchard work. The heavy-duty laser cut shank blanks with shear bolt protection make up these very basic tillage machines. One, two and three-shank models are offered.

STANDARD MACHINE SPECIFICATIONS
