PARA QUE LE TRADUZCA LAS
MEDIDAS DE SEGURIDAD.**

STATEMENT OF POLICY

It is the policy of Worksaver, Inc. to improve its products where it is possible and practical to do so. Worksaver, Inc. reserves the right to make changes or improvements in design and construction at any time, without incurring the obligation to make these changes on previously manufactured units.

HEAVY DUTY 3-PT. MOUNTED POST HOLE DIGGER

**Safety Instructions
Tractor Preparation
Operating Instructions**

**Assembly & Mounting
Maintenance
Repair Parts**

⚠ CAUTION

**THE FOLLOWING SAFETY PRECAUTIONS SHOULD BE THOROUGHLY UNDERSTOOD
BEFORE ATTEMPTING TO BEGIN ASSEMBLING THIS MACHINE**

1. Select an area for assembly that is clean and free of any debris which might cause persons working on the assembly to trip.
2. Do not lift heavy parts or assemblies. Use crane, jack, tackle, fork trucks or other mechanical devices.
3. Preview the assembly instructions in your operator's manual before proceeding further.
4. If the assembly instructions call for parts or assemblies to be blocked up, use only blocking material that is in good condition and is capable of handling the weight of the assembly to be blocked. Also insure that the blocking material is on a clean, dry surface.
5. Never put hands, or any part of body, under blocked up assemblies if at all possible.
6. After completing assembly, thoroughly inspect the machine to be sure that all nuts, bolts, hydraulic fittings or any other fastened assemblies have been thoroughly tightened.
7. Before operating the machine, thoroughly read the operation section of your operator's manual.
8. Before operating, read the maintenance section of your operator's manual to be sure that any parts requiring lubrication, such as gearboxes, are full, to avoid any possible damage.
9. **Before operating equipment – If you have any questions regarding the proper assembly or operation, contact your dealer or representative.**

To the Owner/Operator/Dealer

All implements with moving parts are potentially hazardous. There is no substitute for a cautious, safe-minded operator who recognizes the potential hazards and follows reasonable safety practices. The manufacturer has designed this implement to be used with all its safety equipment properly attached to minimize the chance of accidents.

BEFORE YOU START!!

**Read the safety messages on the implement and shown in your manual.
Observe the rules of safety and common sense!**

THIS SYMBOL MEANS

– ATTENTION!

– BECOME ALERT!

– YOUR SAFETY IS INVOLVED!

THIS SAFETY ALERT SYMBOL IDENTIFIES IMPORTANT SAFETY WARNING MESSAGES. CAREFULLY READ EACH WARNING MESSAGE THAT FOLLOWS. FAILURE TO UNDERSTAND AND OBEY A SAFETY WARNING, OR RECOGNIZE A SAFETY HAZARD, COULD RESULT IN AN INJURY OR DEATH TO YOU OR OTHERS AROUND YOU. THE OPERATOR IS ULTIMATELY RESPONSIBLE FOR THE SAFETY OF HIMSELF, AS WELL AS OTHERS, IN THE OPERATING AREA OF THE TRACTOR AND ATTACHED EQUIPMENT.

UNDERSTAND SIGNAL WORDS

Note the use of the signal words **DANGER**, **WARNING** and **CAUTION** with the safety messages. The appropriate signal word for each has been selected using the following guidelines:

DANGER: Indicates an imminently hazardous situation that, if not avoided, will result in death or serious injury. This signal word is to be limited to the most extreme situations typically for machine components which, for functional purposes, cannot be guarded.

WARNING: Indicates a potentially hazardous situation that, if not avoided, could result in death or serious injury, and includes hazards that are exposed when guards are removed. It may also be used to alert against unsafe practices.

CAUTION: Indicates a potentially hazardous situation that, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

If you have questions not answered in this manual or require additional copies or the manual is damaged, please contact your dealer or the manufacturer directly.

IMPORTANT SAFETY INFORMATION!

Working with unfamiliar equipment can lead to careless injuries. Read this manual, and the manual for your tractor, before assembly or operating, to acquaint yourself with the machines. It is the implement owner's responsibility, if this machine is used by any person other than yourself, is loaned or rented, to make certain that the operator, prior to operating:

1. Reads and understands the operator's manuals.
2. Is instructed in safe and proper use.

The use of this equipment is subject to certain hazards which cannot be protected against by mechanical means or product design. All operators of this equipment must read and understand this entire manual, paying particular attention to safety and operating instructions, prior to using. If there is something in this manual you do not understand, ask your supervisor, or your dealer, to explain it to you.

SAFETY INSTRUCTIONS (continued)

EQUIPMENT SAFETY GUIDELINES

-  Safety of the operator is one of the main concerns in designing and developing a new piece of equipment. Designers and manufacturers build in as many safety features as possible. However, every year many accidents occur which could have been avoided by a few seconds of thought and a more careful approach to handling equipment. You, the operator, can avoid many accidents by observing the following precautions in this section. To avoid personal injury, study the following precautions and insist those working with you, or for you, follow them.

-  In order to provide a better view, certain photographs or illustrations in this manual may show an assembly with a safety shield removed. However, equipment should never be operated in this condition. Keep all shields in place. If shield removal becomes necessary for repairs, replace the shield prior to use.

-  Replace any CAUTION, WARNING, DANGER or instruction safety sign that is not readable or is missing. Location of such safety signs is indicated in this booklet.

-  Never use alcoholic beverages or drugs which can hinder alertness or coordination while operating this equipment. Consult your doctor about operating this machine while taking prescription medications.

-  Review the safety instructions with all users annually.

-  This equipment is dangerous to children and persons unfamiliar with its operation. The operator should be a responsible adult familiar with farm machinery and trained in this equipment's operations. **Do not allow persons to operate or assemble this unit until they have read this manual and have developed a thorough understanding of the safety precautions and of how it works.**

-  To prevent injury or death, use a tractor equipped with a Roll-Over Protective System (ROPS). Do not paint over, remove or deface any safety signs or warning signs on your equipment. Observe all safety signs and practice the instruction on them.

-  Never exceed the limits of a piece of machinery. If its ability to do a job, or to do so safely, is in question - **DON'T TRY IT.**

-  Do not modify the equipment in any way. Unauthorized modification may impair the function and/or safety and could affect the life of the equipment.

-  In addition to the design and configuration of this implement, including Safety Signs and Safety Equipment, hazard control and accident prevention are dependent upon the awareness, concern, prudence, and proper training of personnel involved in the operation, transport, maintenance, and storage of the machine. Refer also to Safety Messages and Operation Instructions in each of the appropriate sections of the Tractor and Implement Manuals. Pay close attention to the Safety Signs affixed to the Tractor and the Implement.

SAFETY INSTRUCTIONS (continued)

SAFETY SIGNS

-  Keep safety signs clean and legible at all times.
-  Replace safety signs that are missing or have become illegible.
-  Replaced parts that displayed a safety sign should also display the current sign.
-  Safety signs are available from your Distributor or Dealer Parts Department or the factory.

How to Install Safety Signs:

-  Be sure that the installation area is clean and dry. Be sure temperature is above 50°F (10°C).
-  Decide on the exact position before you remove the backing paper.
-  Remove the smallest portion of the split backing paper. Align the sign over the specified area and carefully press the small portion with the exposed sticky backing in place.
-  Slowly peel back the remaining paper and carefully smooth the remaining portion of the sign in place. Small air pockets can be pierced with a pin and smoothed out using the piece of sign backing paper.

SAFETY TRAINING

-  Safety is a primary concern in the design and manufacture of our products. Unfortunately, our efforts to provide safe equipment can be wiped out by a single careless act of an operator. It is the operator's responsibility to read and understand ALL Safety and Operating instructions in the manual and to follow these. Accidents can be avoided.
-  In addition to the design and configuration of equipment, hazard control and accident prevention are dependent upon the awareness, concern, prudence and proper training of personnel involved in the operation, transport, maintenance and storage of equipment.
-  Working with unfamiliar equipment can lead to careless injuries. Read this manual, and the manual for your tractor, before assembly or operating, to acquaint yourself with the machines. It is the implement owner's responsibility, if this machine is used by any person other than yourself, is loaned or rented, to make certain that the operator, prior to operating:
 1. Reads and understands the operator's manuals.
 2. Is instructed in safe and proper use.
-  Know your controls and how to stop tractor, engine, and implement quickly in an emergency. Read this manual and the one provided with your tractor.
-  Train all new personnel and review instructions frequently with existing workers. A person who has not read and understood all operating and safety instructions is not qualified to operate the machine. An untrained operator exposes himself and bystanders to possible serious injury or death.
-  Do not allow children to operate this machine.

SAFETY INSTRUCTIONS (continued)

PREPARATION

Personal protection equipment including hard hat, safety glasses, safety shoes, and gloves are recommended during assembly, installation, operation, adjustment, maintaining, repairing, removal, or moving the implement. Do not allow long hair, loose fitting clothing or jewelry to be around moving parts.

PROLONGED EXPOSURE TO LOUD NOISE MAY CAUSE PERMANENT HEARING LOSS!

Tractors with or without implements attached can often be noisy enough to cause permanent, partial hearing loss. We recommend that you wear hearing protection on a full-time basis if the noise in the Operator's position exceeds 80db. Noise over 85db on a long-term basis can cause severe hearing loss. Noise over 90db adjacent to the Operator over a long-term basis may cause permanent, total hearing loss. **NOTE:** Hearing loss from loud noise (from tractors, chain saws, radios, and other such sources close to the ear) is cumulative over a lifetime without hope of natural recovery.

Clear area of stones, branches or other debris that might be thrown or entangled, causing injury or damage.

Operate only in daylight or good artificial light.

Make sure driveline spring-activated locking pin or balls operate freely and are seated firmly in tractor PTO stub shaft groove.

Ensure that all safety shielding and safety signs are properly installed and in good condition.

OPERATIONAL SAFETY

This Post Hole Digger was designed for one-man operation from the tractor seat. It is the responsibility of the operator to see that no one is within twenty-five feet (25') of the digger when it is started. Do not operate the digger with another person near, or in contact with, any part of the digger, PTO driveline, or auger. Serious personal injury or death may result if any attempt is made to assist digger operation by hand.

Most accidents occur because of neglect or carelessness. Keep all helpers and bystanders twenty-five feet (25') from an operating digger. Only properly trained people should operate this machine. It is recommended the tractor be equipped with a Rollover Protection System (ROPS) and a seat belt that is used. Always stop the PTO, set brake, shut off the tractor engine, remove the tractor key, and allow auger to come to a complete stop before dismounting tractor. Never leave equipment unattended with the tractor running.

All things with moving parts are potentially hazardous. There is no substitute for a cautious, safe-minded operator who recognizes potential hazards and follows reasonable safety practices. The manufacturer has designed this digger to be used with all its safety equipment properly attached, to minimize the chance of accidents. Study this manual to make sure you have all safety equipment attached.

If a safety shield or guard is removed for any reason, it must be replaced before the machine is again operated. Always use, and maintain in place, all power take off guards furnished with the tractor as well as the power take off guards and shields furnished with the digger.

SAFETY INSTRUCTIONS (continued)

OPERATIONAL SAFETY (continued)

-  This digger is designed for use only on tractors with 540 RPM power take off.
-  When the use of hand tools is required to perform any part of assembly, installation, adjustment, maintaining, repairing, removal, or moving the digger, be sure the tools used are designed and recommended by the tool manufacturer for that specific task.
-  Never place yourself between the tractor and digger while implement is in operation.
-  Do not walk or work under a raised digger or attachment unless it is securely blocked or held in position. Do not depend on the tractor hydraulic system to hold the digger or attachment in place.
-  A heavy load can cause instability of the tractor. Use extreme care during travel. Slow down on turns and watch out for bumps. The tractor may need front counter-weights to counter-balance the weight of the digger.
-  Never use alcoholic beverages or drugs which can hinder alertness or coordination while operating this equipment. Consult your doctor about operating this machine while taking prescription medications.
-  Do not allow riders on the digger or tractor at any time. There is no safe place for any riders.
-  Before you operate the digger, check over all pins, bolts and connections to be sure all are securely in place. Replace any damaged or worn parts immediately.
-  Consult local utility companies to make certain there are no buried gas lines, electrical cables, etc., in the work area before beginning operation.
-  Do not allow anyone who is not familiar with the safety rules and operation instructions to use this Post Hole Digger.
-  Never allow children to operate or be around this digger.
-  Use stabilizer bars, adjustable sway chains, or sway blocks on your tractor lift arms to keep the Post Hole Digger from swinging side to side. Adjust as tightly as practical for best performance.
-  Never replace the shear bolt OR auger retaining bolt with any length other than what is specified in this manual. A longer, or protruding fastener is more likely to grab loose clothing or gloves which can result in serious injury or death.
-  Do not operate digger on steep hillsides. When digging on uneven or hilly terrain, position the tractor with the Post Hole Digger uphill. With the Post Hole Digger downhill, the tractor could tip when attempting to pull the auger from its hole.
-  Never position the auger point by hand or with any tool when the tractor is running.
-  Never position the auger point by putting your hands on the auger, gearbox, boom, or driveline.

SAFETY INSTRUCTIONS (continued)

OPERATIONAL SAFETY (continued)

-  Inspect the entire machine periodically as indicated in the Maintenance Section of this manual. Look for loose fasteners, worn or broken parts, pinched hydraulic hoses, and leaky or loose fittings. Make sure all pins have cotter pins and washers. Serious injury may occur from not maintaining this machine in good working order.
-  To prevent rapid wear of U-Joints and possible failure of drivelines, never lift auger point more than 12" off the ground with PTO operating.
-  To prevent possible instantaneous driveline failure, never move digger from hole-to-hole or transport while auger is rotating. This could lead to injury from flying pieces of the failed driveline.
-  Keep hands, feet, hair, jewelry, and clothing, away from all moving and/or rotating parts.
-  To prevent entanglement and possible serious injury or death, never use body weight to try to push auger into the ground.
-  Worn edges or a slightly rounded point can seriously effect auger penetration. Check for wear before each use, replace as necessary.
-  Do not shovel dirt away from a rotating auger as the shovel can be caught and thrown by the auger.
-  Do not operate the Post Hole Digger without all safety shields and guards in place.
-  Take all possible precautions when leaving unit unattended: Disengage PTO, set parking brake, stop engine and remove key from ignition. Park in level area.
-  Always use care when operating a Post Hole Digger.

MAINTENANCE SAFETY

-  Good maintenance is your responsibility. Poor maintenance is an invitation to trouble.
-  Follow good shop practices.
 - Keep service area clean and dry.
 - Be sure electrical outlets and tools are properly grounded.
 - Use adequate light for the job at hand.
-  Before working on this machine, drive to a level area, disengage the PTO, lower implement (or if working underneath, raise and block securely), shut off the engine, set the brakes, and remove the ignition keys.

SAFETY INSTRUCTIONS (continued)

MAINTENANCE SAFETY (continued)

-  Personal protection equipment including hard hat, safety glasses, safety shoes, and gloves are recommended during assembly, installation, operation, adjustment, maintaining, repairing, removal, or moving the digger. Do not allow long hair, loose fitting clothing or jewelry to be around moving parts.
-  Always use two people to handle heavy, unwieldy components during assembly, installation, removal, or moving the digger.
-  Never work under equipment unless it is blocked securely. Never depend on hydraulic system to keep implement in raised position.
-  Keep all persons away from operator control area while performing adjustments, service, or maintenance.
-  Always use personal protection devices such as eye, hand and hearing protectors, when performing any service or maintenance.
-  Periodically tighten all bolts, nuts and screws and check that all cotter pins are properly installed to ensure unit is in a safe condition.
-  When completing a maintenance or service function, make sure all safety shields and devices are installed before placing unit in service.
-  Where replacement parts are necessary for periodic maintenance and servicing, genuine factory replacement parts must be used to restore your equipment to original specifications. The manufacturer will not claim responsibility for use of unapproved parts and/or accessories and other damages as a result of their use.
-  If equipment has been altered in any way from original design, the manufacturer does not accept any liability for injury or warranty.
-  Never use your hands to locate a hydraulic leak on attachments. Use a small piece of cardboard or wood. Hydraulic fluid escaping under pressure can penetrate the skin. Openings in the skin and minor cuts are susceptible to infection from hydraulic fluid. If injured by escaping hydraulic fluid, see a doctor at once. Gangrene and death can result. Without immediate medical treatment, serious infection and reactions can occur.

Safety is a primary concern in the design, manufacture, sale, and use of Post Hole Diggers. As manufacturers of Post Hole Diggers, we want to confirm to you, our customers, our concern for safety.

Our current production machines include, as standard equipment, guards or shields for auger adapters, drivelines, input shafts, and safety signs. Older machines can be retrofitted to add these new guards or shields and, of course, safety signs. If you have an older machine which does not have current standard safety equipment, please contact your dealer about bringing your machine up to the current level of safety.

SAFETY INSTRUCTIONS (continued)

TRANSPORT SAFETY

-  Comply with state and local laws governing highway safety and movement of farm machinery on public roads.
-  The use of flashing amber lights is acceptable in most localities. However, some localities prohibit their use. Local laws should be checked for all highway lighting and marking requirements.
-  When driving the tractor and equipment on the road or highway under 20 mph (32 kph) at night or during the day, use flashing amber warning lights and a slow moving vehicle (SMV) identification emblem.
-  Always be sure the implement is in the proper raised position for transport.
-  Reduce speed when transporting mounted implements to avoid bouncing and momentary loss of steering control.
-  Plan your route to avoid heavy traffic. Watch for traffic when operating near or crossing roadways.
-  Do not drink and drive!
-  Turn curves or go up or down hills only at a low speed and at a gradual steering angle. Make certain that at least 20% of the tractor's weight is on the front wheels to maintain safe steering. Slow down on rough or uneven surfaces, and loose gravel.
-  Use extreme care and maintain minimum ground speed when transporting on hillside, over rough ground and when operating close to ditches or fences. Be careful when turning sharp corners.
-  Never allow riders on either tractor or implement. Falling off can kill.
-  Be a safe and courteous driver. Always yield to oncoming traffic in all situations, including narrow bridges, intersections, etc.

STORAGE SAFETY

-  Following operation, or when unhooking, stop the tractor, set the brakes, disengage the PTO, shut off the engine and remove the ignition keys.
-  Do not park equipment where it will be exposed to livestock for long periods of time. Damage and livestock injury could result.
-  Do not permit children to play on or around the stored unit.
-  Make sure all parked machines are on a hard, level surface and engage all safety devices.

SAFETY SIGNS AND DECALS

NOTICE!
GEARBOX SHIPPED WITHOUT OIL

Fill to proper level with EP-90 gear lubricant. **READ operator's manual.**

101188

POST HOLE DIGGER INSTRUCTIONS

1. Fill gearbox to the inspection hole with number 90 weight transmission grease. Check often.
2. Grease universal joints regularly. Check often.
3. Attach stabilizer bars to prevent side swing.
4. Replace shear bolt only with common grade #2 bolts. The use of a hard shear bolt voids all warranty.
5. Disengage PTO when moving.
6. Lift auger periodically to clear hole.
7. **DO NOT LET AUGER SCREW INTO GROUND. HOLD BACK WITH HYDRAULIC LIFT SO IT DIGS. DAMAGE TO DIGGER MAY OCCUR IF NOT PROPERLY OPERATED. DO NOT MOVE TRACTOR WITH AUGER IN GROUND.**

101015

! DANGER

**KEEP CLEAR!
 ENTANGLEMENT CAN CAUSE SERIOUS BODILY INJURY OR DEATH.**

▲ OPERATOR MUST ALWAYS STAY ON TRACTOR SEAT.
 ▲ NEVER OPERATE IF ANYONE IS WITHIN TWENTY-FIVE (25) FEET OF AUGER.
 ▲ NEVER REPLACE SHEARBOLT OR AUGER ATTACHING BOLTS WITH LONGER BOLT.
 ▲ NEVER ATTEMPT TO HANG ON THE DIGGER TO FORCE IT INTO GROUND-SEVERE INJURY OR DEATH COULD OCCUR.

101032

! DANGER ! DANGER ! DANGER

**Rotating Parts Hazard
 Keep Away**

*To Prevent Serious Injury or Death from Rotating Parts:
 Si no entiende ingles, se prefiere que busque a alguien que interprete las instrucciones para usted.*

- Read and understand owner's manual before operating.
- Do not operate without all shields and guards in place.
- Do not use body weight to force the auger into the ground or to locate auger point when auger is turning.
- Keep away from auger, cutting head and driveline when engine is running.

WS101130

LOCATED ON POST HOLE DIGGER BOOM

! DANGER

 When this is visible
DO NOT OPERATE

KEEP CLEAR!
 Keep Others Away!
ENTANGLEMENT HAZARD
can cause Serious Injury or Death

Si no entiende ingles, se prefiere que busque a alguien que interprete las instrucciones para usted.

- Never manually position the auger or manually force the auger into ground.
- This machine is designed to be operated **ONLY** from the tractor seat.
- Keep everyone clear of all moving parts of the digger while in operation.

WS101131

LOCATED AT TOP OF AUGER CENTER TUBE

REMEMBER: If Safety Signs have been damaged, removed, become illegible or parts replaced without Signs, new Safety Signs must be applied. New Safety Signs are available from your authorized distributor or factory.

INSTRUCTIONS

TRACTOR REQUIREMENTS AND PREPARATION

The Model 720 3-pt. mounted post hole digger will fit most Category I, Category II and some larger Category 0 tractors equipped with a standard 3-pt. hitch.

NOTE: Some Category 0 tractors have very short lift arms or $\frac{5}{8}$ " diameter (Cat. 0) lift arm ball ends. These tractors are not usually suitable for post hole digging operation.

It is recommended that only tractors with wide front axles be used with this implement. Tricycle front wheel arrangements are inherently unstable and tractor roll-over accidents are more likely to occur.

Check the tractor's 3-pt. hydraulic lift system. It should operate up and down smoothly and have enough power to lift the dirt-loaded auger out of the hole. Refer to your tractor operator's manual or dealer for any adjustments necessary to put the 3-pt. hydraulic lift system in good working order. (I&T shop manuals will list most specifications and adjustment instructions - available from most farm equipment dealers.)

Check the shield over the PTO stub shaft. Make sure it is in good condition and bolted securely to the tractor. Purchase a new shield if old shield is damaged or missing.

Tractor must be equipped with stabilizer bars, adjustable sway chains, or sway blocks to keep the post hole digger from swinging side to side.

Smaller size tractors may need front counter weights to counter-balance the weight of the post hole digger and the weight of the dirt on the auger.

NOTE: Low profile tractors generally can only use 30" long augers instead of standard 42" long augers. Some low profile Category 0 tractors should use the Model 300 Post Hole Digger.

It is recommended that the tractor be equipped with a Rollover Protection System (ROPS) and a seat belt that is used.

Be sure your tractor is in good condition. Read all the safety precautions and make sure all tractor operators are familiar with the safety rules of operation.

ASSEMBLY AND MOUNTING

Unpack all the bundles and lay out various parts. Start with the yoke (Ref. #2). Place the pull pins (Ref. #10) through the holes in the legs of the yoke and secure with nuts and lock washers.

NOTE: If your tractor lift arm spacing is 32", place the pull pins on the outside of the yoke legs as shown in the diagram. If your tractor lift arm spacing is 26" or less, then place the pull pins on the inner side of the yoke legs. The pins are Category I ($\frac{7}{8}$ " dia.). If your tractor is Category II, then lift arm bushings are required to properly fit the $1\frac{1}{8}$ " dia. Cat. II lift arm balls. (Bushings not supplied.) Place the lift arms of your tractor over the pull pins in the yoke and secure with linchpins (not supplied).

Pin end of digger boom (Ref. #1) to tractor toplink bracket. Raise boom by hand – check that it doesn't hit any part of toplink bracket (some tractors only). If problem exists, change hole location and re-check. **Failure to check can result in boom damage.** Cat. I tractors need bushing. Connect yoke to boom with pin (Ref. #12) and cotter pins.

NOTE: Always use adapter bushings when using Category I pins on a Category II hitch. Trying to use Cat. I pins in a Cat. II hitch without bushings will result in a very sloppy fit and the post hole digger will be unstable.

NOTE: When attaching the yoke to the boom, use the hole in the adjustment channel best suited for your tractor. If you don't know the best hole location, start with the middle hole.

It is recommended that the gearbox output guard, the gearbox input guard, and the PTO driveline be assembled on the gearbox before the gearbox is fastened to the boom. Place the gearbox upside down on the floor.

Install the formed metal gearbox output shield (Ref. #9) on the gearbox. A socket with a long extension makes this an easy installation.

Clean and check the input shaft of the gearbox. If any nicks or dents have occurred in shipping, lightly file to remove and make the shaft smooth.

Slide the plastic cone-shaped input guard on to the input shaft of the gearbox.

Grease the input shaft of the gearbox before installing the PTO shaft. This reduces the chance of the PTO shaft yoke from galling to the input shaft if the shear pin should break.

Slip the two telescoping ends of the PTO shaft together. Spray WD-40 into the yoke and wipe. This should remove some of the paint and make it easier to slide the yoke onto the input shaft of the gearbox. Install the unsplined end on the gearbox input shaft and bolt it in place with the $\frac{3}{8}$ " shear bolt (Ref. #13) and secure with the lock washer and nut.

INSTRUCTIONS (continued)

On the implement end of the PTO shaft there is a hole in the yoke just forward of the $\frac{3}{8}$ " shear bolt (see Figure A). This hole is for the $\frac{3}{16}$ " diameter x $1\frac{1}{4}$ " long roll pin (#2504011). When this roll pin is driven in this hole, the center of the roll pin engages into the groove on the front of the gearbox input shaft. This prevents the PTO assembly from coming off if the $\frac{3}{8}$ " shear bolt should shear. When replacing the shear bolt, use only a soft, Grade 2 shear bolt. DO NOT use a hard bolt!

WARNING!

Do not install a longer bolt or other longer fastener! A protruding fastener is more likely to grab loose clothing and can cause serious injury or death.

Attach the gearbox (Ref. #5) to the boom using the gearbox hitch pin (Ref. #6) and secure it with the two cotter pins (Ref. #7). The gearbox should be placed so that the large shaft is pointing toward the ground and the small shaft is pointing toward the tractor.

NOTE: The gearbox is shipped **WITHOUT** lubricant, so it will be necessary to fill it before use. With the gearbox in a level position, fill to the side inspection hole with a good 90 wt. gear lubricant. Check often and add lubricant if necessary.

Clean tractor PTO stub shaft and the inside of the splined driveline yoke. Pull the spring loaded ring from the end of the yoke and slip the splined driveline yoke on the splined PTO shaft of your tractor. Release the spring loaded ring and push the yoke on until it locks in place. (The spring loaded ring holds locking balls that lock the tractor end of the PTO driveline on the tractor PTO shaft.) Make certain the tractor PTO shield is in good condition and securely fastened onto the tractor.

Slowly raise and lower the digger **without** the auger on. Watch to see that the PTO driveline and/or shields do not separate or get into a bind. Check to see if gearbox end will lower to the ground. If it will not go all the way down, then either change the hole location between the yoke and boom or check to see if the PTO shaft is bottoming.

NOTE: If your tractor PTO shaft has a $1\frac{1}{8}$ " spline, it will be necessary to obtain a $1\frac{1}{8}$ " to $1\frac{3}{8}$ " sleeve spline adapter. If tractor is equipped with a $1\frac{1}{8}$ " to $1\frac{3}{8}$ " spline adapter extension, it may be necessary to cut the PTO shaft off in length. Check this before putting the auger on or digging a hole. To check, raise and lower the post hole digger with the tractor **BEFORE** putting the auger on.

NOTE: The use of a PTO extension could require that the PTO driveline be shortened a considerable amount. If this is done, the driveline halves may separate when the post hole digger is raised to transport position.

If the PTO driveline needs to be shorter, remove the driveline from the tractor and digger gearbox. Lower the digger (without the auger on) until the input shaft of the gearbox is in line with the PTO stub shaft of the tractor. (This should be the shortest distance required for the driveline.)

Pull the two telescoping halves of the PTO driveline apart. Connect the tractor end to the tractor and the gearbox end to the digger gearbox (but NOT with the two halves together).

Hold the two driveline sections parallel to each other and mark each end as to how much too long they are.

Then raise the digger to transport position and again hold the two driveline halves parallel to each other and check for a minimum of 6" (15 cm) overlap. If driveline has less than 6" overlap, do not use. Contact your dealer. If at least 6" of overlap is provided, then proceed in cutting the driveline.

Figure 1

1. If driveline must be cut to a shorter length, clamp driveline in a well padded vise to prevent damage to the shield. Cut off shield where marked. Using cut-off section of shield as a guide, cut shaft the same amount. (Figure 2)

Figure 2

INSTRUCTIONS (continued)

2. Repeat the procedure to the other driveline half. Remove all burrs and cuttings.
3. Apply multi-purpose grease to inside of outer (female) driveline section. Assemble driveline and install on tractor and digger. Pull on each driveline section to be sure yokes lock into place. Make certain driveline shielding is in place and in good condition.
4. Carefully raise and lower the digger and check to be sure the PTO assembly does not jam. If it does, cut equal amounts from each half of the PTO assembly.
5. Check the swinging drawbar of the tractor and make sure the PTO driveline assembly will not contact. The swinging drawbar can be moved forward on some tractors or it can be removed.

NOTICE!

PTO drivelines on model 720 post hole diggers manufactured after October 1, 2000, do not have a dimple protrusion on the square tube half of the driveline or a groove in the 15/16" square shaft.

This means that it is possible to assemble the two halves incorrectly.

Failure to properly align the end yokes may result in excessive vibration.

Always make sure the end yokes are correctly aligned when sliding the driveline halves back together. See figure 3.

Figure 3

NOTE: Use stabilizer bars, adjustable sway chains, or sway blocks on your tractor lift arms to keep the post hole digger from swinging side to side. Adjust as tightly as practical for best performance.

Slide the auger over the large shaft of the gearbox and secure it with the two bolts, lockwashers and nuts. The digger is ready to use.

PREPARATION PROCEDURE

- Thoroughly read and understand your Operator's Manuals.

- Before beginning operation, clear area of objects that wrap around the auger or might be thrown. Contact local utility company to make certain there are no buried gas lines, electrical cables, etc., in the work area. Check for ditches, stumps, holes, or other obstacles that could cause the tractor to roll.
- To dig properly, your digger must be able to raise or lower through the highest and lowest points of your lift arm travel without binding against the tractor frame. Check carefully **BEFORE** attaching the auger. If it does bind, adjust the tractor 3-pt. linkage so that all movement is free.

Operate the post hole digger only on a tractor with 540 RPM PTO shaft. The tractor's engine speed should not exceed 1200 RPM while digging.

If you have ANY questions, regarding the proper operation of this digger, contact your dealer or the manufacturer.

OPERATION

This Post Hole Digger was designed for one-man operation from the tractor seat. **It is the responsibility of the operator to see that no one else is within twenty-five feet (25') of the digger when it is operating.**

- Set tractor brakes. Take tractor out of gear. Shift to "Park" (if applicable).
- Do not allow anyone to stand behind, or to the side of a rotating auger.
- Lower auger point slowly to the ground with the PTO disengaged.
- With the auger point lowered to the ground, set the engine speed to idle, then engage the PTO. Make sure the auger point is on the ground before engaging the PTO.
- Increase the speed as required so dirt is conveyed from the hole. Refer to Owner's Manual for suggestions on PTO speed.
- Under no circumstances should the PTO be run in excess of 540 RPM.

INSTRUCTIONS (continued)

- In some types of soil, it may be necessary to hold back against the auger screw suction by moving the hydraulic control lever to “HOLD” or “RAISE” position to keep the auger from screwing into the ground.
- **NEVER use body weight to help the auger penetrate the ground.** When the ground is too tough to penetrate with your cutting edges and point, sharpen or replace them and try again. These are replaceable parts and must be in good condition to penetrate. (Optional Hydraulic Downpressure Kit is available – order #706080.)
- If you have difficulty penetrating hard ground, refer to Owner’s Manual Troubleshooting section for suggestions.
- When the auger has been lowered about a foot or so into the ground, raise the auger almost out of the hole to clear the dirt, then drill deeper and raise the auger again. Repeat this procedure until the desired hole depth is reached.
- Do not shovel dirt away from a rotating auger as the shovel can be caught and thrown by the auger.
- Disengage the power-take-off when traveling between holes.

IT IS ESSENTIAL THAT EVERYONE INVOLVED IN THE ASSEMBLY, OPERATION, TRANSPORT, MAINTENANCE, AND STORAGE OF THIS EQUIPMENT BE AWARE, CONCERNED, PRUDENT, AND PROPERLY TRAINED IN SAFETY.

The post hole digger auger is free-swinging, and care should be taken while transporting the machine. **DO NOT** transport the post hole digger while the PTO is engaged as this could cause the universal joints of the PTO driveline into a sharp operating angle and cause failure of the driveline.

DIGGING A HOLE: Position the tractor so that the auger point is placed where the hole is to be. Lower the auger so that the point touches the ground. The point of the auger should be approximately 3” back of center of the gearbox. As the auger works into the ground, this slight angle will straighten, due to the pivoting action of the boom downward. If the auger has a side tilt, correct with the lift arm adjustment on the tractor hitch.

If the auger tilts too far forward or to the rear, it may be necessary to move the tractor slightly. Be careful not to bend the auger.

Engage the tractor PTO with the engine at idle (or below 1000 engine RPM). As the auger penetrates the ground, lower the unit slowly with the 3-pt. hydraulic system. **DO NOT LET THE AUGER SCREW ITSELF INTO THE GROUND!** Auger must dig with the dirt breaking up and being carried to the top by the auger flighting.

Once the hole is dug to the desired depth raise the auger while rotating to bring the dirt out of the hole. To get a clean hole, it is sometimes best to lower the auger into the hole with the auger turning and then, when at the bottom, stop the rotation and raise the auger while not turning. This brings the dirt up with little left in the hole.

For best results, allow the digger to dig about half the required depth, then lift it partially out of the hole to remove dirt and then re-enter hole and finish to the desired depth.

Do not shovel dirt away from a turning auger, as the shovel can be caught by the auger and thrown. Do not allow anyone to stand behind or to the side of an operating auger. ALL persons should be at least 25 feet away.

Never locate auger by putting hands on auger, gearbox, or boom when there is any sign of rotation on the driveline or auger or if the tractor is running.

A Grade 2 ($\frac{3}{8}$ " x $2\frac{1}{2}$ ") shear bolt is included with your post hole digger. If the shear bolt shears, replace only with a soft, Grade 2 shear bolt. **DO NOT USE A HARD SHEAR BOLT!** Use of a hard shear bolt could result in damage to the gearbox or other post hole digger parts and voids any warranty.

Do not run the digger while transporting, as damage to the PTO shaft could occur.

DO NOT LET THE DIGGER DIG SO DEEP THAT THE PTO SHAFT IS RUNNING IN THE DIRT.

INSTRUCTIONS (continued)

Remain on the tractor seat while operating the post hole digger. Assisting the machine by hand can result in possible injury or death.

NOTE: Be sure auger is completely retracted from the hole before attempting to move the tractor.

Once the auger is digging a hole, the **tractor cannot be moved**. Make sure brake is set securely. If the tractor does move while the auger is in a hole, **damage to the gearbox or auger can result (not covered by warranty)**.

Cutting edges and screw type center point are replaceable. They should be sharpened or replaced when worn. In hard digging conditions, a fishtail type center point is more aggressive and is recommended.

NOTE: Be careful when raising the auger as high as your tractor's 3-pt. hitch can go. This can put the PTO shaft universal joints at an extreme angle and cause damage to the PTO shaft! It is best to raise the auger just enough to clear the hole when the PTO is engaged.

It is recommended NOT to raise the auger while it is running more than six (6) inches above the ground.

NOTE: If you have a rocky or large root soil condition, it is recommended that a heavy duty auger be used.

If you encounter rocks or roots that catch the auger and cause shear bolts to break, then remove the auger from the hole and use a large, heavy pry bar to break up the obstructing rock. A large root may have to be chopped to remove.

NOTE: Please refer to the drawings (Figures B through F) as to the proper mounting pattern for the cutting edges. Correct mounting of the cutting edges will assure a complete cut of earth by the auger.

If auger becomes lodged below ground, **DO NOT** attempt to lift auger out of ground by hydraulic lift power alone. Turn tractor off and disconnect PTO driveline from the tractor. Reverse the rotation of the auger by several turns. This can be accomplished by using a large pipe wrench and screwing the auger backwards until it clears. Extreme rocking or lifting loads while trying to clear stuck augers can cause auger, gearbox, or boom failure.

Do not attempt to free the auger while the PTO is connected. Disconnect the PTO driveline from the tractor before attempting to free the auger.

Underground utilities – Contact appropriate agencies to determine if hazardous items are buried under the digging site BEFORE DIGGING! Be certain underground utilities have been called to locate underground electric, gas, telephone, and other lines. Check your telephone book for calling instructions. Be sure post hole digger operator is properly informed. WHEN IN DOUBT, DO NOT DIG!

NOTE: Never exceed the recommended auger capacity of the post hole digger. The Model 720 heavy duty digger is designed for use with augers up to 24-inch diameter. Use of an incorrect auger or auger extension can cause equipment damage, loss of operator control and personal injury.

Safety is a primary concern in the design and manufacture of our products. Unfortunately, our efforts to provide safe equipment can be wiped out by a single careless act of an operator.

It has been said, "The best safety device is an informed, careful operator." We ask you to be that kind of an operator.

OWNER SERVICE

The information in this section is written for operators who possess basic mechanical skills. Should you need help, your dealer has trained service technicians available. For your protection, read and follow all safety information in this manual.

WARNING!

- ▲ **Lower post hole digger to ground or block securely, turn tractor engine off, remove key and disconnect PTO driveline from tractor PTO before performing any service or maintenance.**
- ▲ **Before working underneath, raise 3-pt. hitch to desired position and block securely. Hydraulic system leakdown and failure of mechanical or hydraulic system can cause equipment to drop.**
- ▲ **Keep all persons away from operator control area while performing adjustments, service or maintenance.**

ROUTINE MAINTENANCE

DAILY CHECKS:

1. Check that all bolts, nuts, and screws are tight. Checking the bolts and nuts on the cutting blades is particularly important in rocky soil.
2. Check daily the level of the gearbox oil and top up to the correct level. Check for gearbox oil leaks. It should be noted that no warranty claim can be submitted on a gearbox that has run dry. It is essential that the gearbox is kept correctly filled with gearbox oil.
3. Grease the PTO shaft daily.
4. Check the wear on the cutting blades. Sharpen them routinely with an angle grinder or replace when worn down too far. Keep at least two sets of cutting blades, bolts, and nuts as spares.

LUBRICATION INFORMATION

The accompanying chart gives the frequency of lubrication in operating hours, based on normal conditions. Severe or unusual conditions may require more frequent lubrication.

Do not let excess grease collect on or around parts, particularly when operating in sandy areas.

Use an SAE 90W gear lube in gearbox.

Use a lithium grease of NO. 2 consistency with a MOLY (molybdenum disulfide) additive for all locations. Be sure to clean fittings thoroughly before attaching grease gun. When applied according to the lubrication chart, one good pump of most guns is sufficient. Do not over grease.

LUBRICATION CHART

REF NO.	DESCRIPTION	FREQUENCY
1	Front U-Joint	8 Hrs.
2	Rear U-Joint	8 Hrs.
3	Gearbox – Fill to proper level	Check Daily

Daily lubrication of the PTO slip joint is necessary. Failure to maintain proper lubrication can result in damage to U-joints, gearbox, tractor PTO and/or driveline.

AT THE END OF THE SEASON:

1. Drain and change the oil in your gearbox.
2. Check and replace, where necessary, blades, bolts, nuts on the machine.
3. Clean machine and touch up any rust spots that may have appeared.
4. Replace any safety signs if damaged or painted over.
5. Make sure PTO driveline yoke and gearbox input shaft are clean and free of burrs. Keep well lubricated to prevent galling of yoke and input shaft when shear bolt becomes sheared.
6. Keep all shields in place. Order new shields if damaged or missing.
7. Keep cutting edges sharp. Sharp cutting edges dig easier and better. Outer cutting edges on larger augers wear faster than inner cutting edges; switching teeth will even wear.
8. Store implement in clean, dry location.

TRANSPORTING

Pay particular close attention to the Safety Messages regarding transport. Avoid unnecessary injuries and equipment damage by exercising cautious, conscientious travel procedures.

Attaching the implement to the tractor increases the overall length of the working unit. Allow additional clearance for the implement to swing when turning.

Raise the implement as high as possible for transporting.
DO NOT OPERATE PTO DURING TRANSPORT.

REMOVING DIGGER FROM TRACTOR

Post hole diggers when off the tractor, can be an awkward piece of equipment to handle. Be careful not to pinch hands and fingers in the various hinge points of the digger.

If possible, it is suggested to hang the digger from an overhead rafter or beam. Attach the chain or rope around the boom just ahead of the gearbox. This allows one man to easily reconnect the digger to the tractor when next use is required.

If storing outside, hanging from a good solid tree limb has worked for some owners. If storing outside, another idea is to dig a hole about 12-18 inches deep. Then shut the PTO off while the auger is in the hole and disconnect the digger from the tractor. The auger in the hole will keep the unit upright and make it possible for one man to disconnect or reconnect to the tractor. Doing this, will cause rusting of the auger, but it is easy for one man to handle the unit.

TROUBLESHOOTING GUIDE

PROBLEM: AUGER WILL NOT DIG

Possible Solutions:

- Shear bolt sheared – install new shearbolt.
- Teeth dull – sharpen or replace.
- Ground too dry and hard – order optional fishtail point (#170802) or optional down force kit, or wait until it rains.
- Auger turning too fast and bouncing – reduce speed.
- Tall grass has wrapped around auger teeth – remove.
- Auger encountering rocks, roots, or other obstruction – lift auger from hole and inspect.
- Auger teeth improperly positioned – see operator's manual for proper tooth pattern.

PROBLEM: AUGER DIGS SO FAR, BUT WILL NOT DIG DEEPER

Possible Solutions:

- See solutions for above.
- PTO assembly “bottoms out,” not allowing digger to lower – remove auger from digger and lower digger. Gearbox should lower to the ground; if not, PTO driveline assembly may need to be shortened.
- PTO driveline interferes with swinging drawbar – swing drawbar out of the way or remove.
- Tractor hydraulic system may be faulty – consult tractor dealer.
- Soil could have hardpan layer 6”-10” below surface – use optional fishtail point (#170802) or optional down force kit (see list of optional equipment).

PROBLEM: POST HOLE DIGGER SWAYS SIDE TO SIDE

Possible Solutions:

- No sway bars or sway blocks on tractor – add same.
- Lift arms not adjusted evenly – adjust lift arms.
- Post hole digger is mounted with excessive looseness in the hitch connecting points – use proper size pins or bushings.

PROBLEM: BENT AUGER FLIGHTING OR BENT AUGER

Possible Solutions:

- Tractor moved while auger was turning in hole – always set brakes on tractor and make sure it is out of gear.
- Operator moved tractor with auger in hole to try and straighten a hole being dug at an angle.
- Auger is encountering rocks or roots or other foreign objects – remove object from hole or change location.
- Outer edge of auger flighting is bending due to contact with rocks or roots – use heavy duty auger with thicker flighting.
- Shear bolt has been replaced with harder bolt – replace with Grade 2 bolt per instructions.

PROBLEM: AUGER SCREWS ITSELF INTO THE GROUND

Possible Solutions:

- Operator did **NOT** ease 3-pt. hitch to ground slowly.
- Faulty 3-pt. hitch hydraulic system on tractor.
- Draft control is not in **OFF** position.
- Tractor is too small to handle digger.

PROBLEM: EXCESSIVE VIBRATION

Possible Solutions:

- PTO driveline halves are mis-aligned. Pull PTO driveline halves apart and reassemble. Make sure end yokes are aligned correctly.
- PTO driveline bearing cross is worn – replace.

PROBLEM: PTO DRIVELINE ASSEMBLY COMES OFF INPUT SHAFT OF GEARBOX WHEN SHEAR BOLT IS SHEARED.

Possible Solution:

- Roll pin missing in yoke at gearbox input shaft. Install roll pin as per instructions.

**THIS IS A DANGEROUS SAFETY HAZARD,
CORRECT IMMEDIATELY!**

TROUBLESHOOTING (continued)

PROBLEM: PTO DRIVELINE FAILURE

Possible Solutions:

- Operator raising post hole digger too high above ground when PTO is engaged – causes excessive PTO joint operating angle.
- PTO is engaged while moving between holes. (Auger swings, which causes excessive PTO joint operating angle.)
- Improper use of a hard shearbolt – use Grade 2 bolt per instructions.
- Driveline has not been properly lubricated.
- Engaging tractor PTO with engine at high rpm.
- Digging holes too deep so that PTO driveline contacts ground.
- Operating at high rpm.
- Use of auger extension can require post hole digger to be lifted high, which can cause excessive PTO joint operating angle.
- Tractor is a “low profile model” (one that is low to the ground). Due to the low height of the tractor, the digger must be raised higher to have the bottom of the auger clear the ground. Generally, low profile model tractors can only use 30 inch long augers (standard auger length is 42”). Use a different tractor or purchase 30” long augers.

PROBLEM: PTO DRIVELINE “GALLS” OR “FRICTION WELDS” TO INPUT SHAFT OF GEARBOX

Possible Solution:

- No lubrication on input shaft of gearbox to allow yoke of PTO driveline to turn freely on input shaft when shear bolt is sheared. Always keep input shaft greased.

PROBLEM: GEARBOX FAILURE

Possible Solutions:

- No oil in gearbox.
- Oil not changed per instructions.
- Shear bolt has been replaced with a harder bolt – replace with Grade 2 per instructions.
- Bent output shaft is due to operator moving tractor when auger is in hole.

PROBLEM: GEARBOX OVERHEATING

Possible Solutions:

- Low on lubricant – fill to proper level.
- Improper type lubricant – replace with proper lubricant.

PROBLEM: AUGER BOLTS SHEAR ON GEARBOX OUTPUT SHAFT

Possible Solutions:

- Shearbolt on input shaft has been replaced with a harder bolt – replace with Grade 2 bolt as per instructions.

PROBLEM: TRACTOR STALLS

Possible Solutions:

- Auger is encountering rocks or roots or other foreign object – remove object or change hole location.
- Tractor idle is not set correctly – tune tractor engine.

POST HOLE DIGGER OPTIONS

1. **Heavy Duty Augers:** Augers with heavier flighting and a reinforced drive tube are available for rocky or tough soil conditions. Check with dealer for availability.
2. **Heavy Duty Fishtail Center Point:** Recommended for tough or rocky soil conditions. The fishtail point will work around smaller rocks. Order part #170802.
3. **12” Auger Extension:** Available for situations where deeper holes are required. **NOTE:** Smaller tractors may not raise auger high enough to clear hole when 12” auger extension is used. Order part #170705.
4. **Hydraulic Down Force Kit:** For tough, hard soil conditions. This will allow operator to put 300-400 lbs. of down force on the auger to force cutting edges into tough or hard ground. Tractor must have auxiliary hydraulic outlet. Order part #706080 for Model 720 Post Hole Diggers.

**ALWAYS OBEY ALL
SAFETY WARNINGS!!**

GEARBOX REPAIR PROCEDURE

- A. Pack both of the ball bearings (Item 23) with wheel bearing grease (available at a local automotive store) before installing in housing. Also pack top bearing (Item 24) and the cavity in the hanger cap above this bearing with wheel bearing grease at time of assembly.
- B. Nominal backlash of gear mesh is .0095". This backlash should never exceed .022". Adjustment of the gear set backlash, for the quietest gear mounting location, is made only on the output gear. This adjustment is made with the gear adjusting shims (Items 5 and 6). There is a total of .040" of shims. These are normally placed equally on the front and rear of the output gear, .020" front and .020" rear. These shims can be moved in any amount from the front to the rear or the rear to the front, for the quietest mounting location. In no case will the total amount of shims ever exceed .040", and they are never used for the adjustment of the output shaft bearings.
- C. Nominal gasket gap for hanger cap is .031". This gap should never exceed .051", or be less than .020", when adjusting the output bearings (Item 24) for an assembled rolling torque of .83 to 1.00 ft. lbs.
- D. Tighten cap bolts (Item 12) to torque of 31 to 34 ft. lbs.
- E. After assembly, fill the gearbox with 90 wt. gear lubricant to the check plug on the side of the gearbox. Never fill above the check plug level, or seal damage may result.
- F. When installing cotter pin (Item 15) into hanger shaft (Item 14), the cotter pin should not be bent any more than necessary to just keep it from becoming disengaged from the holes in the hanger shaft. Do not bend an excessive amount!

⚠ SAFETY PRECAUTIONS ⚠

**MOST ACCIDENTS OCCUR BECAUSE OF NEGLIGENCE OR CARELESSNESS.
AVOID NEEDLESS ACCIDENTS BY FOLLOWING ALL OF THE SAFETY PRECAUTIONS LISTED BELOW.**

- Machinery should be operated only by those who are responsible and are authorized to do so.
- Stop the engine, lower all equipment, lock the brakes, and remove the ignition key before dismounting from the tractor.
- Never stand between tractor and implement while tractor is being backed to hitch.
- Loose fitting clothing should not be worn, to avoid catching on various parts.
- Detach implement in area where children normally do not play.
- When performing adjustments or maintenance on an implement, first lower it to the ground or block it securely at a workable height.
- Only a qualified operator should be permitted on tractor when in operation; no riders allowed.
- Make certain everyone is in the clear before starting tractor or raising or lowering equipment.
- Operate the tractor and implement only while seated in the driver's seat.
- Reduce speed when transporting mounted implements to avoid bouncing and momentary loss of steering control.
- A heavy load can cause instability of the tractor. Use extreme care during road travel. Slow down on turns and watch out for bumps. Tractor may need front counterweights to counter-balance the weight of the implement.
- Reduce speed on hillsides or curves so there is no danger of tipping.
- Avoid driving too close to the edge of ditches or creeks.
- Do not transport implement on public roads without reflectors and slow moving vehicle emblem in daylight and with approved warning lights at night and other periods of poor visibility.
- Due to the width of some implements, use extra caution on highways, farm roads, and when approaching gates.
- Always be sure the implement is in the proper position for transport.
- Keep alert and watch the front as well as the rear when working with the implement.

LIMITED WARRANTY

W orksaver warrants its implements, parts and accessories to be free from defects in materials and workmanship for a period of six (6) months from date of purchase. Upon written approval, W orksaver will repair or exchange without charge any part, which upon examination by W orksaver or its authorized agent, shall disclose to be defective.

This does not apply to (1) parts that have worn out in normal use, (2) parts broken because of improper assembly or operation by the customer, (3) parts accidentally damaged, (4) failure of parts traceable to improper care, (5) parts failing through use of implement for purposes other than those for which it was designed.

Additions to Limited Warranty

In addition to the Standard Limited Warranty printed above, **Worksaver, Inc.** provides:

1. Five years' (60 months) warranty on the gearbox and,
2. One year (12 months) on the driveline if:

all of these components have been properly maintained and lubricated and that they have not been subjected to abuse or misuse.

The obligations assumed by W orksaver and the limitations expressed herein are in lieu of all other warranties expressed or implied.

Commercial use warranty, 90 days on unit and driveline, one year on gearbox from date of sale.

NOTICE: Worksaver is NOT responsible for damage to augers caused by hitting underground objects (rocks, roots, etc.) or for bent augers caused by moving the tractor with the auger in the ground.
