

TL1000R

INDIVIDUAL BALE WRAPPER

TUBE•LINETM
MANUFACTURING LTD

TL1000R

Individual Wrapper

The TL1000R is a valuable addition to any hay producers arsenal. Easy to maintain and even easier to use, the TL1000R uses tractor hydraulics to spin and rotate the bale ensuring it's completely wrapped every time.

To keep 4' and 5' bales centered, the TL1000R is equipped with adjustable bale guides as well as bale support rollers. It also features a wrap counter to ensure you get the right amount of wraps on each bale.

The integrated knife conveniently cuts the wrap automatically after you've dumped the bale, allowing you to stay in the tractor and start wrapping the next bale.

Minimizing damage to your field, the rollers gently roll over the ground as you tip the wrapper over to dump the bale. When you're finished wrapping, the integrated transport lock ensures that the wrapper can be safely transported to and from the field safely.

Add some value to your operation with a new Individual BaleWrapper from Tubeline.

TL1700SR

Individual Wrapper

Hydraulically powered, the TL1700SR can easily switch between round and square bales by moving the secondary drive shaft on either of the appropriate stub shafts. Each stub shaft changes the drive ratio to provide the appropriate advancement of the bale. When the carrier arm is placed in the wrapping position, the carrier can be raised or lowered, centering the wrap on the bale to provide even plastic coverage throughout the wrapping process. The TL1700SR is also equipped with Tubeline's Twin Wrap Kit which laminates two layers together to form a stronger 2-ply layer of plastic. The Twin Wrap Kit is offset creating a 4" lead which ensures optimal overlap as the film is layered.

The wrapper's integrated bale mat protects the wrapped bale from being punctured as it is dumped, while the bale bumper ensures the bale lands far enough away from the wrapper so the table can rotate while the next bale is started. After dumping the bale, one of the two integrated knives easily slices through the plastic wrap. An easy to use wrap counter allows you to set the desired number of rotations of wrap per bale and displays the current rotation.

Specifications	TL1700SR
Bale Size (Square)	3' x 3' bales up to 7'
Bale Size (Round)	4' x 4' to 5' x 5'6"

TLR 5000 AX2

TUBE-LINE
MANUFACTURING LTD

FEATURES

Starting with the proven performance of the Tubeline wrapping system we focused on developing a wrapper that catered to the needs of the round only operators. We simplified, streamlined and improved until we came up with the TLR5000 AX2.

ENGINE PLACEMENT

The engine is placed below the main controls for easy access and control.

LIMIT SWITCH

Allows you to change the cycle times to fit your bales.

LARGE FUEL TANK

A high capacity fuel tank means less stops for fill ups.

ROLLER WHEELS ON RAM

Reduced friction allows push ram to move with less wear on the frame.

OPTIONS

TWIN WRAP KIT

Double the protection and seal in less time.

REMOTE CONTROL

Control the wrapper from the tractor with this rugged controller.

20 HP ENGINE

Upgrade to a 20 HP 613 cc engine with high flow pump for a faster cycle time.

GUIDE ROLLER

The bale guide roller is the support for wrapping on uneven ground.

FILM SENSOR

Shuts the wrapper down when the film roll is empty so no bales are missed.

HYDRUALIC DRIVE KIT

Easily drive and reposition without towing. Available in single or dual wheel drive configurations.

WORK LIGHT

Keep working until the job is done, even after the sun is gone.

FEATURES

BALEWRAPPER X2

QUICK SET-UP

- Tow into Position
- Place & Wrap End-Capped Bale
- Fold Away Tongue
- Lower Deck and Wrap Away

LOWER DECK HEIGHT

DECK TIGHT PACK

Deck to ground contact provides the friction needed for a tight pack between bales.

No need to self propel from the end of the row due to our pull away design. The TLR5000AX2 tows from front, always keeping the tongue accessible.

TOWING & SAFETY

Unlike other wrapping systems, Tubeline's adjustable tongue is located opposite the end the bales are wrapped, making moving and repositioning a simple task. Safety cages are interlocked with the automatic cycle. When the cage is open the Balewrapper will not run. Shut the Balewrapper down instantly with the E button on the main panel or with the optional remote control from 100 feet away.

FINAL BALE PUSH OFF

Finishing a row is now a simple task. Push the final capped bale through with the fold out Ram. Then ease the bale down the beaver tail with our patented slide out push off arms and cross bar.

PRODUCTION & VALUE WRAPPED UP

We lowered the table to make loading easier for you. We integrated the Quick Start deck for quicker row start up and reduce time between rows. Built from the ground up to provide you with the best round bale wrapping experience because when you wrap thousands of bales it's the small things that make a big difference.

TL 5500 AX2

TUBE-LINE
MANUFACTURING LTD

FEATURES

The tried and proven workhorse of Tubeline's family of wrappers. Built for efficiency and adaptability. Wrap round bales up to 5 and a half feet and with a few quick adjustments wrap 3x3 squares. The versatility and dependability you need.

ENGINE PLACEMENT

The engine is placed below the main controls for easy access and control.

ROLLER BED LOCKING LEVER

Switch from round to square by raising and lowering the roller bed with over-center lever that locks into position.

LIMIT SWITCH

Allows you to change the cycle times to fit your bales.

LARGE FUEL TANK

A high capacity fuel tank means less stops for fill ups.

ROLLER WHEELS ON RAM

Reduced friction allows push ram to move with less wear on the frame.

OPTIONS

QUICK START JACK

A level roller bed secures the first bale for a tight packed start to your row.

TWIN WRAP KIT

Double the protection and seal in less time.

REMOTE CONTROL

Control the wrapper from the tractor with this rugged controller.

20 HP ENGINE

Upgrade to a 20 HP 613 cc engine with high flow pump for a faster cycle time.

GUIDE ROLLER

The bale guide roller is the support for wrapping on uneven ground.

TUBE-LINE
MANUFACTURING LTD

**GENERAL

DISTRIBUTORS

No need to self propel from the end of the row due to our pull away design. The TL5500AX2 tows from front, always keeping the tongue accessible.

TOWING & SAFETY

Unlike other wrapping systems, Tubeline's adjustable tongue is located opposite the end the bales are wrapped, making moving and repositioning a simple task. Safety cages are interlocked with the automatic cycle. When the cage is open the Balewrapper will not run. Shut the Balewrapper down instantly with the E button on the main panel or with the optional remote control from 100 feet away.

ROUND AND SQUARE BALES

The X2 has added features that re-define efficient wrapping. Starting a new row now takes only one bale. Switching from round to square bales is a quick lift of the roller bed with an over-center lever. The engine and control panel are placed neatly together. Both safety guards slide away for easy access. And, the final bale push-off is now only a two-step process.

FINAL BALE PUSH OFF

Finishing a row is now a simple task. Push the final capped bale through with the fold out Ram. Then ease the bale down the beaver tail with our patented slide out push off arms and cross bar.
